PROFESSIONAL OVERVIEW

Senior Software Engineer with 10+ years of experience designing, building, and supporting enterprise and customer-facing applications. Expertise in full-stack development, software architecture, and API design. Hands-on experience with cloud modernization and building AI-integrated production applications. Known for leading cross-functional initiatives, mentoring engineers, defining technical standards, and delivering scalable, high-impact solutions that improve operational efficiency and customer experience. Open to relocation.

WORK EXPERIENCE

WTW (Willis Towers Watson)

Southfield, MI

Senior Software Engineer (Director) Apr 2026 - Present

Lead Software Engineer (Senior Associate) Sep 2023 - Apr 2026

Software Engineer (Lead Associate) May 2022 - Sep 2023

- Lead development of applications supporting 120+ enterprise clients, helping drive architecture decisions, API design, and long-term platform improvements.
- Built the company's first AI integration into a production application, enabling natural language access to enterprise data.
- Reduced Azure hosting costs by optimizing cloud infrastructure across several projects, saving tens of thousands of dollars annually.
- Work closely with product managers, designers, QA, and engineers to deliver reliable, scalable software.
- Partner closely with UI/UX teams to help build and maintain reusable React components, leading front-end refactoring efforts.

General Inspection LLC

Davisburg, MI

Software Engineering Manager May 2021 - May 2022

Software Engineer/Service Support Nov 2018 - May 2021

- Built backend services, machine communication systems, and operator-facing desktop applications for automated production equipment using C#, C++, WinForms, WPF, and MySQL.
- Designed a new MySQL data layer and reporting tools that improved analytics performance by up to 96% and helped teams identify production issues faster.
- Led a team of 4 developers, overseeing task planning, code reviews, technical direction, and delivery across multiple software projects.
- Remained hands-on with system design and development tasks.

EDUCATION

Engineering Management (BSE)

Arizona State University

2025

4.0 GPA

Software Engineering (AAS)

Oakland Community College

2019

3.9 GPA

SKILLS

- C# / .NET
- Java, C++, PHP
- JavaScript/TypeScript
- React, Angular, jQuery
- Visual Studio / VS Code
- Cursor / GitHub Copilot
- Git / GitHub
- Azure Services
- Cosmos Database / Redis
- REST APIs
- CI/CD, Terraform
- MySQL, MSSQL, NoSQL
- WCAG Accessibility

Legoland & Sealife Michigan Cluster

Auburn Hills, MI

Cluster Technician Mar 2016 - Nov 2018

- Designed and developed an excel macro work order tracking system that allowed for automated email notifications – adopted across all North American Legoland Discovery Centers.
- Troubleshoot technical issues with rides and attractions, minimizing downtime and operational impact.
- Supported system configuration, calibration, and upgrades for interactive and control systems.
- Reprogrammed MINILAND lighting control systems using a microcontroller to extend day cycles, shorten night cycles, and introduce realistic sunrise and sunset lighting effects.

ADDITIONAL EXPERIENCE

Oakland HOPE

Pontiac, MI

Principal Software Engineer (Volunteer) Dec 2019 - Current

- Designed and built a full-stack cloud platform using React, TypeScript, C#, Azure App Services, and MySQL supporting daily nonprofit operations.
- Built systems supporting 5,000+ volunteer profiles, 200,000+ volunteer hours, 14,000+ pantry clients, and 8.5+ million pounds of distributed food.
- Integrated Azure OpenAI and reporting tools to provide leadership with natural language access to operational data and analytics.
- Partner directly with executive leadership to define technical roadmap, prioritize enhancements, and ensure long-term platform sustainability.
- Manage the full software lifecycle including architecture, deployments, CI/CD, production support, infrastructure optimization, and feature delivery.
