SUMMARY

Senior Software Engineer with experience designing, building, and supporting production business applications across cloud and on-prem environments. Skilled in collaborating with business stakeholders to translate operational needs into technical requirements for large-scale enterprise systems. Seeking to contribute technical expertise to platforms and products that align with personal interests, while delivering operational and business impact. Open to relocation.

EDUCATION

Engineering Management (BSE)	December 2025
Arizona State University, AZ	4.00 GPA
Relevant Coursework: Programming fundamentals, data structures, PM, systems engineering and upper-division math.	
Software Engineering (AAS)	December 2019
Oakland Community College, MI	3.9 GPA

TECHNICAL SKILLS AND CERTIFICATIONS

Programming Languages & Frameworks: C#, .NET / ASP.NET Core, Java, C++, JavaScript/TypeScript, PHP
Cloud, Architecture & Data: Azure & AWS, REST APIs, CI/CD, MySQL, MSSQL, NoSQL, Entity Framework
Front-End & Tools: HTML5/CSS3, React/Angular, jQuery, Bootstrap, Visual Studio/VS Code, Git/GitHub, Figma/Miro

PROFESSIONAL EXPERIENCE

WTW (Southfield, MI): Director - Software Engineer May 2022 - Current
Senior Software Engineer working within cross-functional Product and Technology sprint teams, focused on delivering new product capabilities across a diverse portfolio of projects. Supports enterprise platforms within the Benefits Outsourcing business, serving more than 120 large clients.

- Contribute to sprint planning, estimation, and technical decision-making to support predictable delivery and long-term maintainability.
- Partner closely with product managers, business analysts, designers, QAs, and SDETs to translate requirements into reliable, user-focused software.
- Mentor new team members in business domain knowledge, coding standards and best practices.
- Deliver roadmap features for large-scale, client-facing applications, contributing across the full software development lifecycle, including design, implementation, optimization, and support.
- Led the end-to-end design and implementation of the first client-facing AI application, enabling natural language queries over enterprise data through a REST API built on Azure OpenAI, Cosmos DB, and Microsoft Semantic Kernel.
- Optimized cloud infrastructure for several projects, reducing annual operating costs by tens of thousands of dollars.
- Integrated third-party APIs and Azure Cosmos DB into ASP.NET applications to enhance client well-being and engagement programs.

General Inspection LLC (Davisburg, MI): Software Engineer/Manager November 2018 – May 2022
Progressed from Software Engineer to Engineering Manager while designing, developing, and supporting software systems used in automated production environments. Led a team of four developers while maintaining hands-on with system architecture, real-time integrations, and operator-facing interfaces.

- Designed and integrated a relational data layer (MySQL) to improve data analytic performance by up to 96%.
- Led the design and implementation of deterministic control logic for production systems.
- Developed and maintained backend services and real-time communication modules.
- Designed and maintained operator-facing desktop applications using Windows Forms and WPF.
- Managed and mentored a team of four developers, overseeing task planning, code reviews, and technical direction.
- Built and optimized data processing algorithms to analyze sensors and measurement data to detect defects.

LEGOLAND & SEALIFE Michigan (Auburn Hills, MI): Technician

March 2016 – November 2018

Technical role supporting attraction and facility systems within a large-scale, guest-facing entertainment environment. In addition to operational responsibilities, identified workflow gaps and built internal automation tools to improve maintenance coordination and visibility across multiple locations.

- Designed and maintained a custom Excel-based work order tracking system using macros and automated email notifications, adopted across all North American locations to improve maintenance visibility and communication.
- Troubleshoot technical issues with rides and attractions, minimizing downtime and operational impact.
- Supported system configuration, calibration, and upgrades for interactive and control systems.
- Reprogrammed MINILAND lighting control systems using a microcontroller to extend day cycles, shorten night cycles, and introduce realistic sunrise and sunset lighting effects.

PROJECTS

Oakland Hope (Oakland County, MI): Volunteer Software Engineer

2019 – Current

Sole Software Engineer responsible for the design, development, deployment, and ongoing support of a production, cloud-hosted application used to manage volunteer operations and food pantry services. Accountable for the entire software lifecycle, including architecture, implementation, integrations, enhancements, and production support. Partner directly with Oakland HOPE leadership and the technical director to define project scopes and timelines.

- Designed and developed a custom, cloud-based web application using React, TypeScript, and C# to manage volunteers and food pantry operations.
- Built a volunteer management system supporting 5,000+ volunteer profiles and tracking 200,000+ volunteer hours, enabling efficient scheduling and engagement.
- Developed a client management platform for the food pantry, tracking 14,000+ clients, 200,000+ visits, and 8.3 million pounds of food distributed.
- Integrated multiple Azure services, including Azure OpenAI, to enable natural language querying of operational data and analytics for staff and leadership.
- Collaborated closely with nonprofit stakeholders to translate operational needs into reliable, user-focused software that supports daily workflow and long-term sustainability.
